EXAMINER'S AMENDMENT

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6-12-2006 has been entered.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Nixon on 6-19-2006.

The application has been amended as follows:

Please delete claim 1 and replace with:

1. A method for obtaining closed form expressions for subsurface temperature depth distribution along with its error bounds, the method comprising:

defining at least two different types of boundary conditions involving at least three different heat sources;

selecting computer inputs from said defined boundary conditions;

Page 3

Application/Control Number: 10/813,437

Art Unit: 2863

using said inputs in a computerized stochastic heat conduction equation incorporating random thermal conductivity to obtain a mean and variance in temperature fields for said input, said equation being:

$$\frac{d}{dz}\{(\overline{K} + K'(z))\frac{dT}{dz}\} = -A(z)$$
 (1)

where

T is the temperature (°C),

A(z) is the radiogenic heat source (μW/m³),

 $K(z) = \overline{K} + K'(z)$ is the thermal conductivity (W/m°C)

which is expressed as a sum of a deterministic component \overline{K} and a random component

K'(z) is the random component with mean zero and a Gaussian colored noise correlation structure represented by

$$\mathsf{E}(\mathsf{K}'(\mathsf{z})) = 0 \tag{2}$$

$$E(K'(z_1)K'(z_2)) = \sigma \frac{2}{K} = \sigma \frac{2}{K} e^{-\rho|z_1 - z_2|}$$
(3)

where

 $\sigma \frac{2}{K}$ is the variance in thermal conductivity (W/m°C)

 ρ is the correlation decay parameter m⁻¹ (or 1/ ρ is the correlation length scale) and z_1 and z_2 are the depths (m); and

outputting said mean and variance in temperature fields.

The following is an examiner's statement of reasons for allowance:

Application/Control Number: 10/813,437 Page 4

Art Unit: 2863

The claims recite, "defining at least two different types of boundary conditions involving at least three different heat sources; selecting computer inputs from said defined boundary conditions". This feature, in combination with the remaining claimed structure, avoids the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Cherry whose telephone number is (571) 272-2272. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571) 272-2269. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/813,437 Page 5
